S.09-724-961-22

Sequence 22. Application US/09724961

Patent No. 6743427

GENERAL INPORMATION:

APPLICANT: Schenk, Dale B.

APPLICANT: Bard, Frederique

APPLICANT: Varquez, Nicki

APPLICANT: Yednock, Ted

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 21. Application US/09724961
Betent No. 6743427
GENERAL INFORMATION:
APPLICANT: Schenk, Dale B.
APPLICANT: Bard, Frederique
APPLICANT: Vanquez, Nicki
APPLICANT: Yednock, Ted
TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease
FILE REFERENCE: 12570J-004750UC
CURRENT APPLICATION NUMBER: US/09/724,961
CURRENT FILING DATE: 2000-11-28
                                                                   OTHER INFORMATION: Description of Artificial Sequence:10-mer peptide; OTHER INFORMATION: from AN1792 sequence (human Abeta42, beta-amyloid; OTHER INFORMATION: peptide)

                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5, Application US/08617267C

Patent No. 6319498

GENERAL INFORMATION:
APPLICANT: Findeis, Mark A. et al.
TITLE OF INVENTION: Modulators of Amyloid Aggregation
NUMBER OF SEQUENCES: 45

CORRESPONDENCE ADDRESS:
ADDRESSER: LAHIVE & COCKFIELD, LLP
STREET: 28 State Street
CITY: Boston
STATE: Massachusetts
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            93.1%; Score 27; DB 2; Length 8; 83.3%; Pred. Sequence 13, Application US/09264709A

Patent No. 6320024
GENERAL INFORMATION:
APPLICANT: Roberts, Eugene
TITLE OF INVENTION: Method for Design of Substances that Enhance Memory and
TITLE OF INVENTION: Improve the Quality of Life
TITLE OF INVENTION: Improve the Quality of Life
FILE REFERENCE: 2124-310
CURRENT PILLING DATE: 1999-03-09
CURRENT FILING DATE: 1997-02-07
RIOR FILING DATE: 1997-02-07
NUMBER OF SEQ ID NOS: 39
SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-74-7-

Sequence 2, Application US/09747408

Patent No. 6670399

GENERAL INFORMATION:

APPLICANT: Geren, Allan M.

APPLICANT: Gervais, Francine

TITLE OF INVENTION: Compounds And Methods For Modulating

TITLE OF INVENTION: Cerebral Amyloid Angiopathy

FILE REFERENCE: NBI-088

CURRENT PELLORION NUMBER: 10/90/147,408

CURRENT FILING DATE: 2000-12-22

PRIOR PILING DATE: 1999-12-23

Patent No. 6890516
GENERAL INPORMATION:
APPLICANT: Tully, Timothy P.
APPLICANT: Tully, Timothy P.
TITLE OF INVENTION: Cloning and Characterizing of Genes
TITLE OF INVENTION: Associated With Long-Term Memory
FILE REFERENCE: CSHL94-03A3Z
CURRENT APPLICATION NUMBER: US/09/419,371
CURRENT PELING DATE: 1999-10-14
FRIOR APPLICATION NUMBER: 08/809,917
PRIOR FILING DATE: 1995-10-06
PRIOR FILING DATE: 1995-10-06
PRIOR FILING DATE: 1995-10-06
PRIOR FILING DATE: 1994-10-07

; Sequence 1, Application US/09747408
; Patent No. 6670399
; GENERAL INFERMATION:
; APPLICANT: Geren, Allan M.
; TITLE OF INVENTION: Compounds And Methods For Modulating;
; TITLE OF INVENTION: Cerebral Amyloid Angiopathy
; FILE REFERENCE: NBI-088
; CURRENT APPLICATION NUMBER: US/09/747,408
; CURRENT FILING DATE: 2000-12-22
; PRIOR APPLICATION NUMBER: 60/171,877
; PRIOR FILING DATE: 1999-12-23

Sequence 27, Application US/09867847
; Sequence 27, Application US/09867847
; Patent No. US20020094335A1
; GENERAL INFORMATION:
; APPLICANT: Chalifour, Robert
; APPLICANT: Hebert, Lise
; APPLICANT: Kong, Xianqi
; APPLICANT: Gervais, Francine
; TITLE OF INVENTION: VACCINE FOR THE PREVENTION AND TREATMENT OF ALZHEIMER'S
; TITLE OF INVENTION: VACCINE FOR THE PREVENTION AND TREATMENT OF ALZHEIMER'S
; TITLE OF INVENTION: AND AMYLOID RELATED DISEASES
; FILE REFERENCE: 14445-501 CIP
; CURRENT PEPLICATION NUMBER: 06/168,594
; PRIOR PLILING DATE: 2001-09-09
; PRIOR FILING DATE: 2000-11-28
; PRIOR PLILING DATE: 2000-11-28
; NUMBER OF SEQ ID NOS: 65
; SOFTWARE: PatentIN Ver. 2.1
; SEQ ID NO 27
                                                                                                                                                                                                                                                                                                                                          APPLICANT: Hebert, Lise
